7.2.1

BEST PRACTICE – 1

**BAMBOO FARMING AS A NATURE BASED SOLUTION
FOR ENVIRONMENT SUSTAINABILITY: MAKING AWARE
OF ITS NEED AND VALUE**

Bamboo has a lot of environmental benefits. As a plant, one of the most obvious environmental advantages that bamboo provides is its capability to emit oxygen and take in carbon dioxide. According to research, bamboo releases 35% more oxygen into the air than your average tree. It can also absorb 12 tonnes of carbon dioxide per hectare and year. Not only does this create cleaner, healthier air, but it also provides humans, along with other living creatures, with a plentiful supply of oxygen that is needed in critical living processes such as respiration. Bamboo produces a substantial amount of oxygen compared to an equal tree mass as well as taking in large amounts of carbon dioxide, triggering a fast rate of carbon sequestration.

Yuvakshetra Institute of Management Studies has one hectare of bamboo garden. It stood as an awareness to our society its environmental benefits. As one of our best practices we promote bamboo cultivation, its value and need for a sustainable future through our students. Our students took initiatives for collecting bamboo saplings. Also we donate bamboo saplings on occasions related to nature, with a motive of giving awareness to the public the benefit of Bamboo Farming as a Nature based Solution for Environment Sustainability
